

# XPERIENCE™

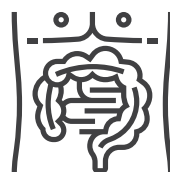

No Rinse Antimicrobial Solution

Current and Ongoing Clinical Trials

## Primary Knee Infection Prevention

This is a 7,000-subject, multi-site, prospective, double-cohort, double-blinded, parallel, randomized, clinical study to assess effects of XPERIENCE in decreasing post-operative infection rates in adult subjects scheduled to undergo primary knee replacement surgery against standard of care alone.

## Colo-Rectal Infection Prevention

This is a 370-subject, multi-site, prospective, controlled, double-blinded, randomized clinical study to assess the effects of XPERIENCE in decreasing post-operative superficial surgical site infection rates of adult subjects scheduled to undergo single and multiple stage open and minimally invasive colorectal surgeries against standard of care alone

## Open Distal Tibia Fracture

This is a 45-subject, prospective, clinical study to assess the effects of XPERIENCE in decreasing post-operative surgical site infection rates in adult subjects with Grade III Tibial Fractures.
